Abstract: *As a result of the systematic archaeological excavations done at Jupa in 2005 in building XI a small silver monetary deposit of 11 denarii was found.*

The paper describes and analyses the 11 silver coins based on: the individual presentation of each coin, the images of the obverse and reverse, the monetary workshop that issued it, the issue year, the metal, the diameter, the weight, the temporary inventory and the catalogue based on which the determination was done.
